Summary

I'm currently a free lance full-stack web developer. My interest in web development started back in 2019 while studying at University, when I helped set up an online store for a friend's small business. The business didn't stick but my interest in development was piqued. Since then I've had the opportunity to work full time at a small tech company, pick up freelance work and pursue passion projects.

Feel free to check out my portfolio site to see some of my previous projects!

Experience

The Hub

Technical Support Analyst, London, England

04/2021 - 04/2022

I began working at The Hub part time while attending the University of Nottingham before accepting a full time position after graduating.

While employed at The Hub I worked alongside senior developers to build and test full stack applications.

I designed and implemented landing pages and login screens using front-end Javascript frameworks like React and Vue.

I've built backend services and APIs using NodeJS including an automated email client that allowed potential customers to request demos.

eProductive

Junior Analyst, London, England

08/2017 - 06/2018

Before attending University I spent a year working as a Junior Analyst at Eproductive.

Wrote queries on behalf of clients in MySQL.

Answered technical support calls and provided training on our software to customers and new employees.

Attended sales meetings and developed my soft skills.

Skills

JavaScript, Vue, React, Node, Express, MongoDB, HTML/CSS

Education

Industrial Economics BSc 2.1

University of Nottingham, Nottingham, England

06/2021

While studying I had the opportunity to take modules on topics like database management and refine my SQL skills.

Self taught HTML/CSS JS Stack while at University.
